

B.Tech. Degree
in
INFORMATION TECHNOLOGY
CURRICULUM & SYLLABUS (CBCS)

Innovation and Product Development for Sustainability

(For students admitted from the Academic Year 2026-2027)

DEPARTMENT OF INFORMATION TECHNOLOGY

St. XAVIER'S CATHOLIC COLLEGE OF ENGINEERING

CHUNKANKADAI, NAGERCOIL – 629 003.

KANYAKUMARI DISTRICT, TAMIL NADU, INDIA

VISION OF THE INSTITUTION

To be an institution of eminence of optimal human development, excellent engineering education and pioneering research towards developing a technically–empowered humane society.

MISSION OF THE INSTITUTION

To transform the (rural) youth into top-class professionals and technocrats willing to serve local and global society with ethical integrity, by providing vibrant academic experience of learning, research and innovation and stimulating opportunities to develop personal maturity and professional skills, with inspiring and high-caliber faculty in a quality and serene infrastructural environment.

VISION OF THE PROGRAMME

Creating top-notch Information Technology Engineers, innovative researchers and successful entrepreneurs towards developing a technically-empowered humane society.

MISSION OF THE PROGRAMME

- M1.** Providing quality technical education and high-caliber skill training that meets the needs of society and the latest technical expectations of the industry.
- M2.** Fostering innovative and rigorous research culture among staff and students to find optimal solutions for complex problems.
- M3.** Imparting value-based education to imbibe ethical principles and act with social responsibility, team spirit, and leadership.
- M4.** Promoting and developing entrepreneurial skills of the students and handhold them towards commercial success.

PROGRAMME EDUCATIONAL OBJECTIVES

- PEO1:** To equip graduates with the analytical and critical thinking skills for a successful career that caters to the diversified needs of industrial sector, academic institutions, and research fields.
- PEO2:** To prepare graduates to integrate software computing and operation tools to provide a consistent and continuous solution to real time problems.
- PEO3:** To empower graduates to design and develop software and hardware products that enhance the human experience, addressing the requirements of society, business, and the environment.
- PEO4:** To make graduates to uphold ethical standards in their professional pursuits and equip them to adapt themselves to address complex engineering problems across multi-disciplinary domain.
- PEO5:** To equip graduates into professionals with the capacity to effectively apply their skill set in diverse environments.

PROGRAMME OUTCOMES

- PO1:** Engineering Knowledge: Apply knowledge of mathematics, natural science, computing, engineering fundamentals and an engineering specialization as specified in WK1 to WK4 respectively to develop the solution of complex engineering problems. (Cognitive Level:Apply)

- PO2:** Problem Analysis: Identify, formulate, review research literature and analyze complex engineering problems reaching substantiated conclusions with consideration for sustainable development. (WK1 to WK4) (Cognitive Level: Analyze)
- PO3:** Design/Development of Solutions: Design creative solutions for complex engineering problems and design/develop systems/components/processes to meet identified needs with consideration for the public health and safety, whole-life cost, net zero carbon, culture, society and environment as required. (WK5) (Cognitive Level: Evaluate/Create)
- PO4:** Conduct Investigations of Complex Problems: Conduct investigations of complex engineering problems using research-based knowledge including design of experiments, modelling, analysis & interpretation of data to provide valid conclusions. (WK8). (Cognitive Level: Create)
- PO5:** Engineering Tool Usage: Create, select and apply appropriate techniques, resources and modern engineering & IT tools, including prediction and modelling recognizing their limitations to solve complex engineering problems. (WK2 and WK6) (Psychomotor: Mechanism, Complex Overt Response, Adaptation and Origination)
- PO6:** The Engineer and The World: Analyze and evaluate societal and environmental aspects while solving complex engineering problems for its impact on sustainability with reference to economy, health, safety, legal framework, culture and environment. (WK1, WK5, and WK7).
- PO7:** Ethics: Apply ethical principles and commit to professional ethics, human values, diversity and inclusion; adhere to national & international laws. (WK9)
- PO8:** Individual and Collaborative Team work: Function effectively as an individual, and as a member or leader in diverse/multi-disciplinary teams.
- PO9:** Communication: Communicate effectively and inclusively within the engineering community and society at large, such as being able to comprehend and write effective reports and design documentation, make effective presentations considering cultural, language, and learning differences
- PO10:** Project Management and Finance: Apply knowledge and understanding of engineering management principles and economic decision-making and apply these to one's own work, as a member and leader in a team, and to manage projects and in multidisciplinary environments.
- PO11:** Life-Long Learning: Recognize the need for, and have the preparation and ability for i) independent and life-long learning ii) adaptability to new and emerging technologies and iii) critical thinking in the broadest context of technological change. (WK8)

KNOWLEDGE AND ATTITUDE PROFILE (WK)

- WK1:** A systematic, theory-based understanding of the natural sciences applicable to the discipline and awareness of relevant social sciences.
- WK2:** Conceptually-based mathematics, numerical analysis, data analysis, statistics and formal aspects of computer and information science to support detailed analysis and modelling applicable to the discipline.
- WK3:** A systematic, theory-based formulation of engineering fundamentals required in the engineering discipline.
- WK4:** Engineering specialist knowledge that provides theoretical frameworks and bodies of knowledge for the accepted practice areas in the engineering discipline; much is at the forefront of the discipline.

WK5: Knowledge, including efficient resource use, environmental impacts, whole-life cost, re use of resources, net zero carbon, and similar concepts, that supports engineering design and operations in a practice area.

WK6: Knowledge of engineering practice (technology) in the practice areas in the engineering discipline.

WK7: Knowledge of the role of engineering in society and identified issues in engineering practice in the discipline, such as the professional responsibility of an engineer to public safety and sustainable development.

WK8: Engagement with selected knowledge in the current research literature of the discipline, awareness of the power of critical thinking and creative approaches to evaluate emerging issues.

WK9: Ethics, inclusive behavior and conduct. Knowledge of professional ethics, responsibilities, and norms of engineering practice. Awareness of the need for diversity by reason of ethnicity, gender, age, physical ability etc. with mutual understanding and respect, and of inclusive attitudes.

PROGRAMME SPECIFIC OUTCOMES

PSO1: Formulate optimal solutions to tackle the obstacles in information and communication engineering by utilizing programming expertise.

PSO2: Build and manage IT infrastructure to solve real world problems with modelling, analytical and prediction tools, techniques and resources.

PSO3: Develop computing systems using the agile and integrated software development practices to enhance the lifestyle of the public.

SUSTAINABLE DEVELOPMENT GOALS

GOAL 1: No Poverty

End poverty in all its forms everywhere

GOAL 2: Zero Hunger

End hunger, achieve food security and improved nutrition and promote sustainable agriculture

GOAL 3: Good Health and Well-being

Ensure healthy lives and promote well-being for all at all ages

GOAL 4: Quality Education

Ensure inclusive and equitable quality education and promote lifelong learning opportunities for all

GOAL 5: Gender Equality

Achieve gender equality and empower all women and girls

GOAL 6: Clean Water and Sanitation

Ensure availability and sustainable management of water and sanitation for all

GOAL 7: Affordable and Clean Energy

Ensure access to affordable, reliable, sustainable and modern energy for all

GOAL 8: Decent Work and Economic Growth

Promote sustained, inclusive and sustainable economic growth, full and productive employment and decent work for all

GOAL 9: Industry, Innovation and Infrastructure

Build resilient infrastructure, promote inclusive and sustainable industrialization and foster innovation

GOAL 10: Reduced Inequality

Reduce inequality within and among countries

GOAL 11: Sustainable Cities and Communities

Make cities and human settlements inclusive, safe, resilient and sustainable

GOAL 12: Responsible Consumption and Production

Ensure sustainable consumption and production patterns

GOAL 13: Climate Action

Take urgent action to combat climate change and its impacts

GOAL 14: Life Below Water

Conserve and sustainably use the oceans, seas and marine resources for sustainable development

GOAL 15: Life on Land

Protect, restore and promote sustainable use of terrestrial ecosystems, sustainably manage forests, combat desertification, and halt and reverse land degradation and halt biodiversity loss

GOAL 16: Peace and Justice Strong Institutions

Promote peaceful and inclusive societies for sustainable development, provide access to justice for all and build effective, accountable and inclusive institutions at all levels

GOAL 17: Partnerships to achieve the Goal

Strengthen the means of implementation and revitalize the global partnership for sustainable development.

SEMESTER: I

Number of Courses: 12

Total Credits: 22

Course Code	Course Title	Course Type	Classroom Instruction (CI) (in Hours per Semester)		Lab Instruction (LI) (in Hours per Semester)	Term Work (TW) and Self Learning (SL) (in Hours per Semester)	Total Number of Hours (in Hours per Semester)	Total Credits (C) = (Total Hours/30)	SDG Goal Mapped	Category

SEMESTER I

IP26C01	INDUCTION PROGRAMME	L	T	P	TW/SL	Total	C	SDG
		40	26	14	40	120	0	3,4,8,16
COURSE OBJECTIVES:								
- To help students transition smoothly into college life. - To build confidence, communication, and interpersonal skills. - To introduce human values and ethical living. - To familiarize students with institutional environment and departments. - To promote physical and mental well-being.								
COURSE CONTENT:								
UNIT I	Proficiency Modules	10	4	6	8	28		4
Language proficiency (English communication basics & LSRW skills) - Vocabulary building and sentence formation - Fundamentals of Science (Mathematics, Physics & Chemistry) - Basic Computer Knowledge.								
Activities:								
1. Ice-breaker self-introduction (1-2 minutes per student) to build confidence, followed by a listening activity using an audio/video clip with MCQs.								
UNIT II	Universal Human Values - I	8	3	4	8	23		16
Concept and Significance of Value Education - Self-exploration - Human Aspirations and Concerns - Understanding the Human Being as Coexistence of Self and Body - Needs of the Self and the Body - Relationship between Self and Body - Health - Relationships - Society - Nature - Happiness and Prosperity.								
Activities:								
1. Students think about their goals and discuss happiness and healthy living.								
UNIT III	Soft Skills	7	3	5	8	23		8

TEXT BOOKS:	
1.	Debidutta Acharya, Amitabh Nanda, “Universal Human Values: Navigating Ethics and the Environment with Case Studies Approach”, S. Chand Publishing, 2025.
2.	Kuldeep S. Sharma, Sarveen Kaur Sachdeva, “Universal Human Values”, Books Clinic Publishing, 2023.
REFERENCES:

Mapping of Course Outcomes to Programme Outcomes and Programme Specific Outcomes

Course Outcomes	PO											PSO		
	1	2	3	4	5	6	7	8	9	10	11	1	2	3
CO1	1	-	-	-	-	-	-	-	2	3	-	-	-	-
CO2	1	1	-	-	-	2	1	3	2	2	-	-	-	-
CO3	1	-	-	-	-	1	-	2	3	3	-	-	-	-
CO4	2	2	-	-	-	2	1	2	1	2	-	-	-	-
CO5	1	1	-	-	-	2	1	2	1	2	-	-	-	-
CO	1	1	-	-	1	2	1	2	2	2	1	-	-	-

3 - High, 2 - Medium, 1 – Low

Practical:

1. Plotting of single variable functions and finding its extreme values using simulation software.

Activities:

1. Optimization of piston motion in an engine/Condition for maximum power dissipation in a resistive circuit/Algorithm performance optimization/Minimize cost or maximize strength using polynomial models in structural designs/Stress-strain curve approximation.

UNIT IV	Ordinary Differential Equations	9	0	6	9	24		4,9
----------------	--	---	---	---	---	----	--	-----

Order - Degree - Differential operator - Linear differential equations of second and higher order with constant coefficients – Methods for finding particular integrals of exponential (e^{ax}), trigonometric ($\sin ax$, $\cos ax$) and polynomial functions – Method of variation of parameter (trigonometric functions only).

Practical:

1. Solving higher-order ordinary differential equations using simulation software.

Activities:

1. Vibration Analysis of a mass-spring-damper system/Transient response of current in a series RLC circuit supplied by a DC voltage source/Dynamic resource adjustment using differential equations/Structural response prediction using differential equation.

UNIT V	Vector Calculus	9	0	6	9	24		4,9
---------------	------------------------	---	---	---	---	----	--	-----

Vector differential operator - Gradient, divergence and curl (excluding vector identities) - Directional derivative of a scalar point function - Irrotational and solenoidal vector fields - Integral theorem: Green's theorem and Gauss divergence theorem (Statement only) - Simple applications involving cubes and rectangular parallelopiped.

Practical:

1. Finding directional derivative of a function using simulation software.

Activities:

1. Rotation in image processing vector fields/Electric field from a scalar potential function/Seepage analysis in dams and foundations by computing total out flow/Power flow analysis in vector fields.

COURSE OUTCOMES:

At the end of the course, the students will be able to:

CO1:	Apply the Cayley-Hamilton theorem for matrix inversion and orthogonal transformation of symmetric matrices.
CO2:	Solve systems of linear equations using direct and iterative methods.
CO3:	Interpret differentiation techniques to determine the maximum and minimum values of polynomial functions.
CO4:	Solve higher-order ordinary differential equations in engineering fields.
CO5:	Utilize concepts of vector calculus in solving engineering problems.

Weightage: Continuous Assessment: 50%, End Semester Examinations: 50%	
Assessment Methodology: Activity (10%), Practical (10%), Internal Examinations (30%)

3 - High, 2 - Medium, 1 - Low

PH26C02	PHYSICS FOR COMPUTER ENGINEERS	L	T	P	TW/SL	Total	C	SDG
		30	0	0	30	60	2	3,4,7,9,12
COURSE OBJECTIVES:								
- To provide fundamental knowledge of conducting, semiconducting, magnetic and superconducting materials essential for engineering applications. - To introduce semiconductor physics and basic electronic devices used in modern electronic systems. - To familiarize students with magnetic and superconducting materials along with their applications in engineering field. - To give insight on quantum structure and quantum computing. - To equip learners with knowledge of nanomaterials and nanodevices.								
COURSE CONTENT:								
UNIT I	Conducting Materials	6	0	0	6	12		3,4,9
Classical free electron theory - merits and limitations - Expression for electrical conductivity - Fermi-Dirac distribution function - Density of energy states - Energy bands in solids - Electron effective mass (Concept only) - Concept of holes - Computed Tomography scan. Activities*: 1. Temperature dependence of conductivity - Demo.								
UNIT II	Semiconducting Materials	6	0	0	6	12		4,9
Introduction - Intrinsic and Extrinsic semiconductors - Direct and Indirect band gap semiconductors - Carrier concentration: Intrinsic semiconductors - Hall effect: Determination of Hall coefficient - Display technology: OLED. Activities*: 1. Semiconductor market mapping activity - Poster.								
UNIT III	Magnetic and Superconducting Materials	6	0	0	6	12		3,4,7,9

Magnetic materials: review of fundamental terms - Giant magneto-resistance effect - GMR sensors - Superconductors - Meissner effect - Critical field - Critical current - Type I and Type II superconductors - Josephson effect - applications: Magnetic levitation, Superconducting qubits.

Activities*:

1. Magnetic materials and Superconductors - Puzzle.

UNIT IV	Quantum Computing	6	0	0	6	12		4,7,9
----------------	--------------------------	---	---	---	---	----	--	-------

Introduction - Quantum confinement - Quantum structures: quantum wells, wires and dots - Quantum system for information processing - Quantum states - Classical bits - qubits - Single qubits - Bloch sphere - CNOT gate.

Activities*:

1. Quantum structures and Quantum Computing - Quiz.

UNIT V	Nano materials	6	0	0	6	12		3,4,9, 12
---------------	-----------------------	---	---	---	---	----	--	--------------

Introduction to nanomaterials - Synthesis by sol-gel method - properties: Physical, Optical, and Magnetic properties - Coulomb blockade effect - Single-electron transistor - Carbon nanotubes: Properties and Applications - Nanotechnology application in electric vehicle.

Activities*:

1. Nano vs Micro vs Macro - size comparison with common objects.

* Students can do either a mini project for the entire course or all the activities given in each unit.

COURSE OUTCOMES:

At the end of the course, the students will be able to:

CO1:	Utilize free-electron theory and band theory to interpret the Physics of electrical and thermal conduction in solids.
CO2:	Apply the properties of semiconductors, carrier concentrations, and the Hall effect in basic semiconductor devices.
CO3:	Use the magnetic and superconducting properties of materials in various applications of modern technology.
CO4:	Demonstrate the use of quantum structures, classical bits, and qubits in solving problems related to quantum information processing.
CO5:	Integrate the properties of nanomaterials in explaining the working principles of nanoscale devices.

Weightage: Continuous Assessment: 40%, End Semester Examinations: 60%

Assessment Methodology: Activity (30%), Internal Assessment Test (70%)

1. Prepare a report analyzing various alternatives to plastics and their significance.								
UNIT IV	Social issues and the environment	6	0	0	6	12		9,11,13,17
Climate change - Global warming - Climate change and public health - Climate change and food security. Food Adulteration - Common adulterants and the method to detect them - Sustainable food processing techniques. Activities: 1. Prepare a report analyzing the presence of adulterants in five commonly used food items through appropriate testing methods.								
UNIT V	Environment and Sustainability	6	0	0	6	12		4,7,12,13
Sustainable Development Goals (SDGs) - Environmental Impact Assessment (EIA) - Life cycle assessment - Risk assessment - Environment auditing - Concept of Carbon credit, Carbon footprint, Ecological footprint - Importance and applications - Environmental protection acts - Green chemistry - Principles and applications - Eco mark and Eco products. Activities: 1. Creating models based on Eco products.								
COURSE OUTCOMES:								
At the end of the course, the students will be able to:								
CO1:	Implement ecological and biodiversity methods to conserve ecosystems and species.							
CO2:	Use sustainable techniques to manage forests, water, land, and agriculture.							
CO3:	Apply pollution control and waste management methods to reduce environmental hazards.							
CO4:	Implement climate change mitigation and food safety practices to assess risks and ensure food security.							
CO5:	Apply environmental and green strategies to minimize ecological impact.							
Weightage: Continuous Assessment: 40%, End Semester Examinations: 60%								
Assessment Methodology: Activity (30%), Internal Assessment Test (70%)

IT26101	INFORMATION TECHNOLOGY FUNDAMENTALS (Lab Integrated)	L	T	P	TW/SL	Total	C	SDG
		30	0	30	30	90	3	4,8,9
COURSE OBJECTIVES:								
- Introduce fundamental concepts of computer systems, hardware, software, networking, and digital systems. - Develop basic programming and computational thinking skills. - Familiarize students with operating systems, databases, and web technologies. - Provide essential skills in multimedia, animation, and computer graphics. - Bridge the gap between school-level computing and engineering-level IT education.								
COURSE CONTENT:								
UNIT I	Fundamentals of Computers and Digital Systems	6	0	6	6	18		4
History and Generations of Computers - Classification of Computers - The Computer System - CPU, Memory, I/O devices - Number Systems and Binary Arithmetic - Logic Gates and Digital Circuits. Practical: 1. Assemble a PC using virtual simulator. 2. Digital logic simulation using simulation software. Activities: 1. Worksheets on number systems and binary arithmetic. 2. Digital logic game (truth table activity).								
UNIT II	Software, OS and System Architecture	6	0	6	6	18		4,8
Types of Software: System Software and Application Software - Generations of Computer Programming languages - OS Basics: Process management, Memory management, File systems - Virtualization and Cloud. Practical: 1. Deployment of Windows/Linux OS in a Virtual Machine and working with basic Linux commands. Activities: 1. OS comparison chart presentation. 2. A comparative case study on cloud services offered by cloud providers. 3. Group discussion on open-source software.								
UNIT III	Networking and Programming Fundamentals	6	0	6	6	18		4,8

Network Basics: Components of Network, Types of Networks, Topology - Program Development Life Cycle - Program Design Tools: Algorithms, Flowcharts, Pseudocode - Programming Paradigms and Logics.

Practical:

1. Develop algorithms, flowcharts, and pseudocode to solve problems involving operators, conditional statements, and looping constructs.

Activities:

1. Design different types of networks (LAN, MAN, WAN) using network components.
2. Design simple network for a computer lab or small office using network simulation software.

UNIT IV	Database and Web Technologies	6	0	6	6	18		4,8
----------------	--------------------------------------	---	---	---	---	----	--	-----

DBMS Concepts and Data Models - SQL Basics - HTML, CSS and Web Page Design - Internet Protocols and Client-Server Architecture.

Practical:

1. Retrieval of data from the database using SQL Queries.
2. Create web page using HTML/CSS.

Activities:

1. Design and develop a personal website to showcase the academic achievements, projects, skills, and career aspirations.
2. Draw an Entity Relationship diagram for any application.

UNIT V	Graphics and Multimedia	6	0	6	6	18		8,9
---------------	--------------------------------	---	---	---	---	----	--	-----

Multimedia Components: Text, Image, Audio, Video, Animation - Types: Linear and Non-linear Multimedia - Applications of Multimedia, Definition of Computer Graphics - Image Formats - Animation and Video Fundamentals - Case Studies.

Practical:

1. Use image editing tool to perform resizing, transformation, cropping, and contrast adjustment.
2. Perform audio and video recording and editing operations.

Activities:

1. Digital poster creation using multimedia tools.
2. Logo design using multimedia tools.
3. Storyboard generation - creating animated narratives.

COURSE OUTCOMES:

At the end of the course, the students will be able to:

CO1:	Utilize fundamental computer concepts to solve basic computational problems.
CO2:	Apply the concepts of system software, application software, and operating system functions to select appropriate solutions.
CO3:	Develop problem-solving logic using structured programming approaches.
CO4:	Implement database and web concepts to develop simple applications.

CO5:	Operate multimedia and computer graphics tools to create and edit digital content.
Weightage: Continuous Assessment: 50%, End Semester Examinations: 50%	
Assessment Methodology: Activity (10%), Practical (10%), Internal Assessment Test (30%)

EN26C01	TECHNICAL COMMUNICATION	L	T	P	TW/SL	Total	C	SDG
		15	15	0	30	60	2	4,8, 10

COURSE OBJECTIVES:

- To develop basic listening and speaking competence through interactive tasks.
- To strengthen reading and writing abilities by exposing learners to diverse texts.
- To equip students with practical communication skills.
- To foster creativity, confidence, and presentation skills.
- To build interpersonal and professional communication skills.

COURSE CONTENT:

UNIT I	Foundations of Communication Skills	3	3	0	6	12		1
--------	-------------------------------------	---	---	---	---	----	--	---

Listening: Listening for Local/Global Comprehension

Speaking: Introducing oneself (formal and informal), Introducing others

Reading: Reading Comprehension, Brochures, Advertisements

Writing: Hints Development

Language Study: Sentence/Types of sentences

Vocabulary: Parts of Speech

CO1:	Demonstrate confidence and clarity in professional seeking and active listening.
CO2:	Apply effective reading strategies to comprehend, analyze, and interpret varieties of texts.
CO3:	Write grammatically accurate and coherent technical reports and letters.
CO4:	Use appropriate vocabulary and grammar to enhance presentation skills.
CO5:	Integrate interpersonal skills for ideal communication in professional contexts.
Weightage: Continuous Assessment: 40%, End Semester Examinations: 60%	
Assessment Methodology: Activity (30%), Internal Assessment Test (70%)

TA26C01	HERITAGE OF TAMILS	L	T	P	TW/SL	Total	C	SDG
		15	0	0	15	30	1	3,4,10,11,12,13,15,16

COURSE OBJECTIVES:

- To help students understand the history of Tamil literature.
- To help students understand the heritage of Tamils, including paintings and musical instruments.
- To help students understand the traditional arts of Tamils.
- To create awareness among students about the lifestyle of Tamils and its values.
- To understand the contribution and influence of Tamils in Indian culture.

COURSE CONTENT:

UNIT I	Language and Literature	3	0	0	3	6		4,10
--------	-------------------------	---	---	---	---	---	--	------

Indian language families - Dravidian language family - Sangam literature - Pathinenkeezhkanakku texts - Management concepts in the Tirukkural - Tamil epics (The Five Great Epics) - Bhakti literature (Alvars and Nayanmars).

Activities:

1. Design a poster titled Tamil Literature.

UNIT II	Heritage - From Rock Paintings to Modern Painting and Sculpture Art	3	0	0	3	6		11,12
---------	---	---	---	---	---	---	--	-------

Minor literary works - Development of modern Tamil literature - Contributions of Subramania Bharati and Bharathidasan to Tamil literary growth - Sculptures - Panchaloha (five-metal) idols - Thiruvalluvar Statue - Tribal communities and their handicrafts - Chariot making art - Tamil musical instruments: Mridangam, Parai, Veena, Yazh, Nadaswaram.

Activities:

1. Quiz Based on Literature.

UNIT III	Folk Arts and Games	3	0	0	3	6		3,4
----------	---------------------	---	---	---	---	---	--	-----

Therukoothu, Karagattam, Villupattu, Kaniyan Koothu, Oyilattam, Silambam, Valari - Folk deities - Traditional Tamil games: Jallikattu (bull embracing), Ilavattakkal, Sadugudu, Uriyadi, Slippery pole climbing, Bullock cart.

Activities:

1. Role Play: Performing Arts.

3.	Dr. Mu. Varadarasanar, "History of Language", Tirunelveli South India Saiva Siddhanta Publishing Society Ltd., 1954.
4.	Robert Caldwell, "A Comparative Grammar of the Dravidian Languages", Vallavar Pannai, Chennai, 1959.

3 - High, 2 - Medium, 1 - Low

CS26C03	C PROGRAMMING LABORATORY	L	T	P	TW/SL	Total	C	SDG
		0	0	60	0	60	2	4,8,9,12

COURSE OBJECTIVES:

- To familiarize students with using office software for documenting algorithms and flowcharts.
- To develop skills in writing C programs using conditional statements and loops for decision-making and iteration.
- To train students to handle arrays, pointers, and structures for efficient data manipulation and memory management.

- To implement searching (linear, binary) and sorting (bubble, selection) algorithms to solve real-world problems.
- To build proficiency in creating modular programs using functions, string operations, and structures in C.

PRACTICAL EXPERIMENTS:

1.	Design algorithms and draw flowcharts for given problems using office software tools.
2.	Write C programs using conditional statements (if, if-else, switch) to solve simple problems.
3.	Develop C programs using looping constructs (for, while, do-while) for iterative computations.
4.	Write programs to perform operations on arrays such as traversal, searching, and basic manipulations.
5.	Develop programs using pointers: - Swapping two numbers using pointers - Demonstrating pointer arithmetic
6.	Implement searching techniques: - Linear Search - Binary Search
7.	Implement sorting techniques: - Bubble Sort - Selection Sort
8.	Write programs using user-defined functions with different parameter passing and return types.
9.	Develop programs for string manipulation using standard library functions (strlen, strcpy, strcmp, strcat).
10.	Write structure-based programs to store and process grouped data.

COURSE OUTCOMES:

At the end of the course, the students will be able to:

CO1:	Apply knowledge of the evolution and organization of computers to design algorithms and flowcharts for solving simple problems.
CO2:	Apply conditionals and loops for decision-making & iteration.
CO3:	Apply arrays and pointers for efficient data handling.

CO4:	Design search and sort algorithms.
CO5:	Create modular C programs using functions, strings, structures.
Weightage: Continuous Assessment: 60%, End Semester Examinations: 40%	
Assessment Methodology: Model Practical (25%), Evaluation of Student's Work, Observation, Record, etc. (75%).

ME26C02	ENGINEERING WORKSHOP AND MAKERSPACE	L	T	P	TW/SL	Total	C	SDG
		0	0	60	0	60	2	4,9

COURSE OBJECTIVES:

- To provide fundamental knowledge of tools, equipment, fastening methods, and safe handling practices used in basic engineering operations.
- To develop the ability to disassemble, analyze, and reassemble common household appliances with an understanding of their components and functions.
- To impart practical skills in carpentry, plumbing, and machining operations for fabrication and maintenance tasks.
- To introduce modern manufacturing techniques such as additive manufacturing (3D printing) and laser cutting for basic component fabrication.
- To familiarize students with basic electronics, PCB soldering, circuit simulation, and Arduino-based interfacing for simple engineering applications.

LIST OF ACTIVITIES:

- 1. Tools, Equipment, and Handling Techniques**
 - 1.1. Understanding various hand tools, power tools, and measuring instruments used in mechanical dis-assembly, assembly, fabrication, plumbing, and digital manufacturing operations.
 - 1.2. Safety guidelines and practices, maintenance of tools, and correct usage techniques.
 - 1.3. Overview of fastening methods and plumbing fittings.
 - 1.4. Introduction to Machine Tools:
 - 1.4.1. Familiarization with Drilling Machine – components, working principles, and basic exercise.
 - 1.4.2. Familiarization with Cutting Machine – components, working principles, and basic exercise.

2. Dis-assembly and Assembly of Home Appliances

2.1. Study, dis-assembly, and assembly procedures for household electrical appliances:

2.1.1. Mixer Grinder

2.1.2. Ceiling Fan/Table Fan

2.2. Identification of key components, functional study, and common fault diagnosis.

2.3. Practical re-assembly ensuring correct alignment, balance, and operation testing.

3. Carpentry, Plumbing and Machining Practices

Carpentry Practice:

3.1. Introduction to carpentry: study of woodworking tools, materials, wood joints and safety measures.

3.2. Overview of carpentry hand tools and power tools.

3.3. Preparation of marking wood surfaces, measurement techniques and cutting practice.

3.4. Hands-on practice in:

3.4.1 Cutting, chiseling, planning and filing wood operations.

3.4.2 Fabrication of simple wood joints (Lap Joint and T – Joint)

3.5. Demonstration of Basic Operations using CNC Router.

Plumbing Practice

3.6. Familiarization with pipes, fittings, valves, plumbing materials, and tools.

3.7. Hands-on practice in pipe cutting, threading, joining, and leak-proof connections.

Machining Practice

3.8. Introduction to lathe machine: study of lathe components, cutting tools, work piece materials, basic machining operations, and safety measures.

3.9. Hands-on practice in turning, drilling and tapping operations in the given work piece

4. Additive Manufacturing and Laser Cutting

3D Printing

4.1. Understanding the principles of 3D printing.

4.2. Machine setup and slicing process.

4.3. Demonstration on preparing and printing mechanical parts.

Laser Cutting

4.4. Introduction to laser cutting principles and safety precautions.

4.5. Setting up the machine, material selection, and cutting parameters.

4.6. Demonstration of simple and complex Shapes using Laser Cutting Machine.

5. Electronic Engineering Practices

Basic Electronics Practices

5.1. Introduction to active and passive components.

5.2. Hands-on session of Soldering Practices in a Printed Circuit Board.

5.3. Simulation of Simple Electronic Circuits.

Arduino Interfacing and PCB

5.4. Introduction to Arduino and sensors.

5.5. Hands-on session using Arduino: Blinking LED and Relay Switching.

Demonstration of PCB fabrication machine, including basic operation, layout transfer, drilling, and

safety practices.	
COURSE OUTCOMES:	
At the end of the course, the students will be able to:	
CO1:	Identify and use various hand tools, power tools, measuring instruments, fastening methods, and machine tools following appropriate safety practices.
CO2:	Demonstrate the disassembly, inspection, fault diagnosis, and reassembly of common household appliances.
CO3:	Perform basic carpentry, plumbing, and machining operations, including wood joint fabrication, pipe fitting, and lathe operations.
CO4:	Apply principles of additive manufacturing and laser cutting to prepare and fabricate simple components.
CO5:	Develop and test basic electronic circuits, perform PCB soldering, and implement simple Arduino-based interfacing applications.
Weightage: Continuous Assessment: 60%, End Semester Examinations: 40%	
Assessment Methodology: Evaluation of Student's work, Observation, Record, Activity (75%), Model Practical Test (25%)

1.	MIT FABLAB Tutorials, (n.d.). Massachusetts Institute of Technology, https://fablab.mit.edu/
2.	3D Printing Basics – 3D Systems Learning Center, (n.d.). 3D Systems, https://www.3dsystems.com/learn
3.	Carpentry and Woodworking Basics – Carpentry.edu, (n.d.). Carpentry Training Resources,

pace and tone, Extempore speaking – thinking on the spot, Structuring ideas quickly using mind maps, Public speaking basics – audience awareness and eye contact, Verbal communication – sentence formation and fluency improvement, Vocabulary usage in everyday and professional contexts, Communication activities and group interaction exercises, Reflective feedback sessions and self-assessment techniques

Activities

1. Self-Introduction and Peer Introduction
2. Extempore Speaking Session

UNIT II	Body Language, Professional Etiquette and Workplace Readiness	0	0	6	6	12		3,4
----------------	--	---	---	---	---	----	--	-----

Body language fundamentals – posture and its impact, Eye contact – significance and practice, Gestures and facial expressions in communication, Theatrical – expression activities and role plays, Non-verbal communication signals and interpretation, Professional etiquette – workplace conduct and formal communication, Grooming and personal presentation standards, Dress code norms and first impression management, Mock professional scenarios – interviews, meetings and presentations, Practical activities for formal greeting and introduction, Feedback and reflection on professional behavior

Activities

1. Body Language and Non-Verbal Communication Workshop
2. Theatrical – Expression and Role Play Activity
3. Mock Professional Scenario Simulation

UNIT III	Interpersonal Skills, Team Dynamics and Conflict Resolution	0	0	6	6	12		5,16
-----------------	--	---	---	---	---	----	--	------

Interpersonal skills – active listening techniques, Empathy in communication and relationship building, Team vs Wild – team collaboration and leadership roles, Decision making under pressure and group consensus, Conflict resolution strategies and de-escalation techniques, Handling feedback positively in workplace settings, Workplace communication – formal and informal registers, Effective written workplace communication – emails and memos, Team activities and group challenges for leadership development, Peer evaluation and constructive critique in team settings

Activities

1. Team vs Wild – Team Collaboration and Leadership Challenge
2. Conflict Resolution and Feedback Handling Role Play

UNIT IV	Critical Thinking, Logical Reasoning and Debate	0	0	6	6	12		4,8
----------------	--	---	---	---	---	----	--	-----

Who Gets the Heart – logical decision making scenarios, Ethical reasoning and value-based judgment activities, Debate fundamentals – argument building and structuring, Critical thinking skills – identifying assumptions and biases, Rebuttal techniques and counter-argument strategies, Analytical thinking and structured problem solving frameworks, Logical reasoning games and puzzle-based discussion activities, Cause-and-effect reasoning in communication contexts, Organizing ideas for persuasive communication, Group debate activities and moderated discussions

Assessment Type	Weightage	Marks	Mode of Evaluation
Continuous Skill Assessment (CSA)	60%	60	Continuous, rubric-based evaluation through communication activities, grammar exercises, presentations and participation
Terminal Skill Assessment (TSA)	40%	40	Weekly assessment + communication practical + presentation/interview + portfolio viva
Total	100%	100	—

A. Continuous Skill Assessment (CSA)

Component	Description	CO(s)	Marks
Daily Topical Assessment	Short assessment at the close of each session evaluating communication concepts, grammar application, logical reasoning or professional etiquette, recorded continuously.	CO1, CO3	10
Communication Activities & Participation	Rubric-based evaluation of classroom activities including Self & Peer Introduction, Extempore, Theatrical, Team vs Wild, Who Gets the Heart, Role Plays and other communication exercises.	CO2, CO5	10
Group Discussion, Debate & Team Activities	Continuous assessment of participation in group discussions, debates, leadership activities, conflict resolution exercises and collaborative problem-solving.	CO2, CO4	10
Grammar & Written Communication Exercises	Evaluation of grammar worksheets, vocabulary activities, sentence correction, paragraph writing, email drafting and integrated writing tasks.	CO1, CO3	10
Presentation & Public Speaking	Assessment of extempore speaking, public speaking, persuasive presentations and audience engagement based on predefined rubrics.	CO3, CO5	10
Professional Portfolio & Reflective Journal	Evaluation of professional emails, reflective journal, self-assessment reports, peer feedback and communication portfolio.	CO4, CO5	10
Subtotal (CSA)			60

B. Terminal Skill Assessment

Component	Description	CO(s)	Marks
Weekly Assessment	Cumulative score of weekly consolidation tests assessing communication concepts, grammar, vocabulary, logical reasoning and workplace communication.	CO1, CO3	10

Communication Practical Examination	Practical assessment comprising extempore speaking, role play, group discussion or workplace communication scenario demonstrating verbal and non-verbal communication skills.	CO2, CO5	15
Presentation / Professional Interview	Individual presentation or panel-based mock interview assessing communication, confidence, body language, professional etiquette and critical thinking.	CO3, CO4	10
Portfolio Viva-Voce	Review of communication portfolio, written assignments, reflective journal and professional communication artefacts through viva.	CO4, CO5	5
Subtotal (TSA)			40

C. Common Evaluation Rubrics

Evaluation Criterion	Descriptor	Weight
Knowledge & Application	Demonstrates understanding of concepts and applies them appropriately in communication activities, discussions and written tasks.	25%
Communication & Language	Uses appropriate grammar, vocabulary, fluency, articulation and clarity in spoken and written communication.	25%
Critical Thinking & Problem Solving	Demonstrates logical reasoning, analytical thinking, decision-making and the ability to respond effectively in different situations.	20%
Professionalism & Teamwork	Exhibits confidence, body language, etiquette, collaboration, leadership, active listening and respect for others.	20%
Participation & Presentation	Shows active participation, preparedness, creativity, organization, time management and overall presentation quality.	10%

MA26C02	Statistics and Numerical Methods (Lab Integrated)	L	T	P	TW/SL	Total	C	SDG
		45	0	30	45	120	4	4,9,13

COURSE OBJECTIVES:

- To acquire knowledge of hypothesis testing for both small and large samples, which plays an important role in real life problems.
- To encourage students to develop a practical understanding of Analysis of Variance.
- To acquaint the knowledge of non-parametric tests which plays an important role in real life problems.

- To acquaint the knowledge of various numerical methods of solving ordinary differential equations.
- To introduce numerical integration techniques used in engineering and technology disciplines.

COURSE CONTENT:

UNIT I	Testing of Hypothesis	9	0	3	12	24		4,9,13
Statistical hypothesis - Type I and Type II errors - Large sample test for single mean and difference of means - Test based on t distribution for single mean and equality of means - Test based on F distribution for equality of variances. Practical: 1. Testing of hypothesis for equality of variances using simulation software. Activities: 1. Comparison of manufacturing process variability/Vibration and noise analysis/Soil property analysis.								
UNIT II	Design of Experiments	9	0	3	12	24		4,9,13
General principles - Analysis of variance (ANOVA) - One-way classification - Completely randomized design (CRD) - Two-way classification - Randomized block design (RBD) - Three-way classification - Latin square design (LSD). Practical: 1. Analysis of variance for randomized block design using simulation software. Activities: 1. ANOVA in machine learning models/Network traffic analysis/Heat transfer experiments/Concrete mix design.								
UNIT III	Non-Parametric Test	9	0	3	12	24		4,13
Chi-square test for single variance - Independence of attributes - Contingency table: Analysis of r X c tables - Kolmogorov-Smirnov test for goodness of fit. Practical: 1. Testing of hypothesis of independence of attributes using simulation software. Activities: 1. Goodness of fit in software testing/Quality control in manufacturing/Structural damage analysis.								
UNIT IV	Numerical Solution of Ordinary Differential Equations	9	0	3	12	24		4,9,13

Single-step methods: Euler's method - Modified Euler's method - Fourth order Runge-Kutta method for solving first order equations - Multi-step methods: Milne's predictor corrector method - Adam's Bashforth predictor corrector method for solving first order equations.

Practical:

1. Solving ordinary differential equations by fourth order Runge-Kutta method using simulation software.

Activities:

1. Gradient based learning equations/RLC circuit equations/Equation of motion/Simulate dynamic behavior of mechanisms.

UNIT V	Numerical Solution of Integration	9	0	6	12	24		4,9,13
---------------	--	---	---	---	----	----	--	--------

Numerical integration using Trapezoidal and Simpson's $1/3$, $3/8$ rules - Numerical double integration: Trapezoidal and Simpson's rules.

Practical:

1. Evaluating integration by Trapezoidal rule using simulation software.

Activities:

1. Area under frequency response curve/Numerical estimation of signal power using Simpson's rule/Work done by variable force/Velocity-distance calculation.

COURSE OUTCOMES:

At the end of the course, the students will be able to:

CO1:	Apply large sample tests, t- and F-tests to analyze real-world engineering data and draw statistically valid conclusions.
CO2:	Utilize one-way and multi-way ANOVA techniques for experimental data analysis and statistical decision making.
CO3:	Interpret variance, goodness of fit, and independence of attributes using Chi-square and Kolmogorov-Smirnov tests in real-life problems.
CO4:	Solve first-order differential equations using single-step and multi-step methods.
CO5:	Make use of Trapezoidal and Simpson's rules in numerical integration.

Weightage: Continuous Assessment: 50%, End Semester Examinations: 50%

Assessment Methodology: Activity (10%), Practical (10%), Internal Examinations (30%)

PH26C01	ENGINEERING PHYSICS (LAB INTEGRATED)	L	T	P	TW/SL	Total	C	SDG
		30	0	30	30	90	3	3,4,9
COURSE OBJECTIVES:								
- To provide fundamental knowledge of physical principles relevant to engineering applications. - To enable students to understand ultrasonic wave generation, propagation, and its industrial applications. - To introduce quantum mechanics concepts essential for modern engineering materials and devices. - To explain the principles of photonics, lasers, and fiber optics for communication and sensing applications. - To strengthen the understanding of the mechanical properties of matter and their importance in structural engineering.								
COURSE CONTENT:								
UNIT I	Ultrasonics	6	0	6	6	18		3,4,9
Ultrasonics - properties - production: piezoelectric Oscillator - acoustic grating: wavelength and velocity of ultrasonic waves in liquids - applications: ultrasonic flaw detector - sonography. Practical: 1. Determination of velocity of ultrasonic waves in liquid medium Activities: 1. Ultrasonics - Puzzle								
UNIT II	Quantum Mechanics	6	0	6	6	18		4,9
Introduction - Blackbody radiation - Wien's displacement law - Rayleigh-Jean's law - Planck's radiation law (Derivation) - Schrödinger's time-independent wave equation - particle confined in one-dimensional infinite square well potential - eigenvalues and eigenfunctions - Introduction to Quantum Computing. Practical: 1. Photoelectric effect - Determination of Planck's constant. Activities: 1. Light effect vs Electrons - Virtual lab.								
UNIT III	Photonics	6	0	6	6	18		3,4,9

Theory of laser action: simulated absorption, spontaneous emission and stimulated emission - Einstein's A and B coefficients - population inversion and pumping mechanisms - laser systems: Nd-YAG laser, LIDAR in Archaeology – photodiode.

Practical:

1. Laser - wavelength of laser using diffraction grating and particle size determination.

Activities:

1. LED vs Semiconductor laser - A comparison

UNIT IV	Fiber Optics	6	0	6	6	18		3,4,9
----------------	---------------------	---	---	---	---	----	--	-------

Optical fiber - principle - propagation of light through fiber - Fiber fabrication: Double crucible method - Fiber optic communication system - Endoscope - fiber optic pressure sensor.

Practical:

1. Optical fiber - Numerical aperture and Acceptance angle of an optical fiber.

Activities:

1. Fiber optic temperature sensor - Demo.

UNIT V	Properties of Matter	6	0	6	6	18		4,9
---------------	-----------------------------	---	---	---	---	----	--	-----

Elasticity - stress, strain - types of elastic moduli - factors affecting elasticity - Internal bending moment - Determination of Young's modulus: Cantilever - uniform bending - weighing system.

Practical:

1. Uniform bending - Young's modulus of the material of the beam.

Activities:

1. Case study - Compare how Young's modulus of materials influence their uses.

COURSE OUTCOMES:

At the end of the course, the students will be able to:

CO1:	Use the principles of ultrasonic wave generation and their properties to identify and solve some industrial problems.
CO2:	Calculate energy eigenvalues and wave functions of basic physical systems using quantum mechanical principles.
CO3:	Apply the principle of stimulated emission in the operation of a laser, its characteristics, and applications.
CO4:	Demonstrate the use of optical fibers in communication systems and Endoscopy.
CO5:	Determine the elastic moduli of materials through experimental methods by using their mechanical properties.

Weightage: Continuous Assessment: 50%, End Semester Examinations: 50%	
Assessment Methodology: Activity (10%), Practical (10%), Activities (10%)

CH26C01	APPLIED CHEMISTRY (Lab Integrated)	L	T	P	TW/SL	Total	C	SDG
		30	0	30	30	90	3	3,6, 7, 9,11,12 ,13
COURSE OBJECTIVES:								
- To enable students to understand water quality and its treatment methods - To provide knowledge of polymers and their applications - To develop an understanding of electrochemical cells and their applications - To impart knowledge of corrosion and its protection methods - To familiarize students with the principles of photochemistry								
COURSE CONTENT:								
UNIT I	Water Technology	6	0	6	6	18		6,3,12
Water quality parameters - Hardness - Estimation (EDTA method) - Alkalinity - DO - Softening methods - Electrochemical water softening - Solar desalination of sea water - Reverse Osmosis. Practical: 1. Determination of total hardness of water sample (EDTA method). 2. Estimation of Alkalinity in water sample. Activities: 1. Case study on water quality analysis.								
UNIT II	Polymer Chemistry	6	0	6	6	18		9,12,13

Polymers - Engineering plastics - preparation, properties and uses of PET, PVC, Polyurethane, PTFE - Conducting polymers - Shape memory polymers - Biodegradable polymers - properties, applications.

Practical:

1. Determination of molecular weight of polymer by viscosity average method using Ostwald Viscometer.

Activities:

1. Preparation of a poster comparing normal plastics with biodegradable plastics.

UNIT III	Electrochemistry	6	0	6	6	18		7,9,12
-----------------	-------------------------	---	---	---	---	----	--	--------

Electrochemical cells - Electrochemical reactions - Electrodes - pH determination - Conductometric and Potentiometric titrations - Electroplating - Electroless plating.

Practical:

1. Determination of strength of HCl by pH meter.
2. Conductometric titration of mixture of acids (HCl and CH₃COOH).

Activities:

1. Electrochemical cell simulation.

UNIT IV	Corrosion Chemistry	6	0	6	6	18		9,11,12
----------------	----------------------------	---	---	---	---	----	--	---------

Corrosion - Theories and Preventive methods - Protective coatings - Paints - Components and their uses - Types - Nanotechnology-based coating - Polymer-modified asphalt coating.

Practical:

1. Estimation of ferrous ions in rust.

Activities:

1. Case study on factors influencing corrosion in underground pipelines.

UNIT V	Photochemistry	6	0	6	6	18		7,9,13
---------------	-----------------------	---	---	---	---	----	--	--------

Photochemical laws - Jablonski diagram - Fluorescence - Phosphorescence - Chemiluminescence - Photosensitization - Photocatalysis - Mechanism and applications.

Practical:

1. Estimation of potassium Oxalate using Potassium Permanganate by a photochemical reaction.

Activities:

1. Report on the list of fluorescence and Phosphorescence in everyday life.

COURSE OUTCOMES:

At the end of the course, the students will be able to:

CO1:	Use water quality analysis techniques to implement water treatment, softening and desalination methods.
CO2:	Apply polymer chemistry principles to select and use engineering and special polymers in practical applications.
CO3:	Demonstrate electrochemical principles by operating electrochemical cells and industrial plating processes.
CO4:	Apply corrosion principles to implement corrosion prevention and protective coating methods.
CO5:	Perform and apply photochemical principles to carry out photochemical reactions for industrial applications.
Weightage: Continuous Assessment: 50%, End Semester Examinations: 50%	
Assessment Methodology: Activity (10%), Practical (10%), Internal Examinations (30%)

IT26201	OBJECT ORIENTED PROGRAMMING TECHNIQUES	L	T	P	TW/SL	Total	C	SDG
		45	0	30	45	120	4	4,9

COURSE OBJECTIVES:

- To learn the principles of Object-Oriented Programming and explain basic C++ constructs
- To familiarize the concepts of classes, objects, constructors, destructors, and object-handling techniques
- To implement polymorphism, operator overloading, type conversions, and various forms of inheritance
- To work on C++, I/O stream classes to perform console and file operations, including reading, writing, and updating data efficiently

- To know about generic programming with templates, handle exceptions, and effectively use STL components for building robust applications

COURSE CONTENT:

UNIT I	Object-Oriented Programming and C++ Fundamentals	9	0	6	9	24		4
---------------	---	---	---	---	---	----	--	---

OOP Fundamentals: Object Oriented Programming Paradigm, Basic Concepts of OOP, Benefits and Applications of OOP - C++ Basics: Structure of C++ Program, Tokens - Keywords, Identifiers and Constants, Data Types, Operators, Control Structures - Functions in C++: Function Prototyping, Call by Reference, Return by Reference, Inline Functions, Default and const Arguments, Recursion.

Practical:

1. Implement the concept of keywords, identifiers, constants, and operators using C++ program.
2. Implement the concept of call by reference and return by reference using C++ functions.

Activities:

1. Create a mind map for the basic concepts of Object-Oriented Programming (OOP).
2. Draw the flowchart and write the pseudocode to solve a problem using function concepts.

UNIT II	Classes And Objects	9	0	6	9	24		4
----------------	----------------------------	---	---	---	---	----	--	---

Classes: Specifying a Class, Defining Member Functions - Arrays within a Class - Objects: Memory Allocation for Objects, Static Data Members and Static Member Functions, Array of Objects, Object as Function Arguments, Friendly Functions, Returning Objects - Constructors: Parameterized Constructors, Multiple Constructors, Copy Constructor, Dynamic Constructors - Destructors.

Practical:

1. Write a C++ program using an array of objects of a class.
2. Write a C++ program to demonstrate parameterized constructor and copy constructor.

Activities:

1. Draw a class diagram showing attributes and methods.
2. Group Discussion: “Constructor vs Destructor in C++”

UNIT III	Polymorphism and Inheritance	9	0	6	9	24		9
-----------------	-------------------------------------	---	---	---	---	----	--	---

Polymorphism - Friend and Virtual Functions - Function Overloading - Operator Overloading - Type Conversions - Inheritance: Defining Derived Classes, Various forms of Inheritance: Single, Multilevel, Multiple, Hierarchical and Hybrid Inheritance - Virtual Base Classes and Abstract Classes - Constructors in Derived classes.

Practical:

1. Write a C++ program to demonstrate runtime polymorphism using virtual functions.
2. Write a C++ program to overload unary and binary operators.
3. Write a C++ program to demonstrate single inheritance and multiple inheritance.

Activities:

1. Think-Pair-Share: Type conversion.
2. Prepare a poster on types of inheritance with one real-life example for each.

UNIT IV	I/O Operations and File Handling	6	0	6	9	24		9
----------------	---	---	---	---	---	----	--	---

I/O Operations: C++ Stream Classes, Unformatted I/O operations, Formatted Console I/O Operations - Working with Files: Classes for File Stream Operations, Opening and Closing a File, Sequential I/O operations, Updating a File: Random Access.

Practical:

1. Write a C++ program to create a file, write data into it and then read the contents.

Activities:

1. Prepare a comparative chart for unformatted I/O operations and formatted console I/O operations in C++.
2. Create a mind map for file stream classes hierarchy in C++.

UNIT V	Exception Handling, Templates and Standard Template Library	6	0	6	9	24		9
---------------	--	---	---	---	---	----	--	---

Exception Handling: Exception Handling Mechanism - Templates: Class Templates, Function Templates - Standard Template Library (STL): Components of STL, Containers and Iterators.

Practical:

1. Write a C++ program to demonstrate exception handling.
2. Write a C++ program using function templates.

Activities:

1. Case Study on Templates, Exception Handling, and STL.

COURSE OUTCOMES:

At the end of the course, the students will be able to:

CO1:	Apply the fundamental concepts of Object-Oriented Programming (OOP) and explain basic C++ constructs, including operators, control structures, and functions.
CO2:	Implement C++ programs using classes, objects, constructors, destructors, and object-handling techniques for efficient program design.
CO3:	Use polymorphism, operator overloading, type conversions, and various forms of inheritance to achieve code reusability and flexibility in C++.

CO4:	Utilize C++ I/O stream classes to perform console and file operations, including reading, writing, and updating data efficiently.
CO5:	Apply templates and exception handling to build robust and reusable C++ programs.
Weightage: Continuous Assessment: 50%, End Semester Examinations: 50%	
Assessment Methodology: Activity (10%), Practical (10%), Internal Examinations (30%)

TA26C02	தமிழரும் தொழில்நுட்பமும்	L	T	P	TW/SL	Total	C	SDG
		15	0	0	15	30	1	2,4,6,8, 9,11,12 ,14

COURSE OBJECTIVES:

- சங்ககால நெசவு மற்றும் பானை (செராமிக்) தொழில்நுட்பத்தை மாணவர்கள் புரிந்துகொள்ள உதவுதல்
- சங்ககாலத்தில் தமிழர்களின் கட்டிட வடிவமைப்பைப் பற்றி விழிப்புணர்வு ஏற்படுத்துதல்
- பழங்கால உற்பத்தித் தொழில்நுட்பத்தின் பல்வேறு நிலைகளை மாணவர்கள் வேறுபடுத்திக் காண உதவுதல்
- வேளாண்மை மற்றும் பாசனத் தொழில்நுட்பத்தில் உள்ள பண்டைய அறிவை புரிந்துகொள்ளுதல்
- தமிழ்மொழியின் டிஜிட்டல்மயத்தை (Digitalization) மாணவர்கள் புரிந்துகொள்ளச் செய்தல்

COURSE CONTENT:

UNIT I	நெசவு மற்றும் பானைத் தொழில்நுட்பம்	3	0	0	3	6		8,12
--------	------------------------------------	---	---	---	---	---	--	------

சங்க காலத்தில் நெசவுத் தொழில் - பானைத் தொழில்நுட்பம் - கருப்பு சிவப்பு பாண்டங்கள் - சுடுமண் சிற்பங்கள் - பாண்டங்களில் கீறல்

குறியீடுகள் - தொல்லியல் சான்றுகள்.

Activities:

1. பாட அடிப்படையிலான வினாடி வினா.

UNIT II	வடிவமைப்பு மற்றும் கட்டிடத் தொழில்நுட்பம்	3	0	0	3	6		9,11
----------------	--	---	---	---	---	---	--	------

சங்க காலத்தில் கட்டுமானங்கள் - நடுகல் - சிலப்பதிகாரத்தில் மேடை அமைப்பு - மாமல்லபுரம் சிற்பங்களும், கோவில்களும் - சோழர் காலத்துப் பெருங்கோயில்கள், தஞ்சை பெரியக்கோயில், கங்கை கொண்ட சோழபுரம் கோயில், தாராசுரம் கோயில் - நாயக்கர் காலக் கோயில்கள் - திருமலை நாயக்கர் மகால் - மதுரை மீனாட்சி அம்மன் கோயில் - ஆங்கிலேயர் கால இந்தோ-சாரோசெனிக் கட்டிடக் கலை.

Activities:

1. ஒவ்வொரு குழுவும் ஒரு கால கட்டிடத்தை விளக்குதல்.

UNIT III	உற்பத்தித் தொழில் நுட்பம்	3	0	0	3	6		8,9
-----------------	----------------------------------	---	---	---	---	---	--	-----

உலோகவியல், இரும்புத் தொழிற்சாலை - இரும்பை உருக்குதல், எஃகு - வரலாற்றுச் சான்றுகளான நாணயங்கள் - நாணயங்கள் அச்சடித்தல் - மணி உருவாக்கும் முறைகள் - கல்மணிகள், கண்ணாடி மணிகள் - சுடுமண் மணிகள் - சங்கு மணிகள் - எலும்புத்துண்டுகள் - சிலப்பதிகாரத்தில் மணிகளின் வகைகள்.

Activities:

1. நாணயங்கள் & மணிகள் அடையாளம் காணுதல்.

UNIT IV	வேளாண்மை மற்றும் நீர்ப்பாசனத் தொழில் நுட்பம்	3	0	0	3	6		2,6,14
----------------	---	---	---	---	---	---	--	--------

அணை, ஏரி, குளங்கள், மதகு - சோழர்காலக் குழுமித் தூம்பின் முக்கியத்துவம் - கிணறுகள் - கால்நடை பராமரிப்பு - வேளாண்மை மற்றும் வேளாண்மைச் சார்ந்த செயல்பாடுகள் - கடல்சார் அறிவு - பெருங்கடல் குறித்த பண்டைய அறிவு - கப்பல் கட்டும் கலை - மீன்வளம் - முத்து மற்றும் முத்துக்குளித்தல் - அறிவுசார் சமூகம்.

Activities:

on the internet - Lexicon (Sorkuvai) project.

Activities:

1. Project: The Digital World of Tamil.

COURSE OUTCOMES:

At the end of the course, the students will be able to:

CO1:	Able to explain the importance of weaving and pottery technology during the Sangam period.
CO2:	Able to describe the knowledge of architectural design of the Tamils during the Sangam period.
CO3:	Able to demonstrate a strong foundational understanding of the production technologies of ancient Tamils.
CO4:	Able to explain the importance of ancient Tamil agricultural and irrigation technologies.
CO5:	Able to explain the concept of digitalization of the Tamil language.

Weightage: Continuous Assessment: 40%, End Semester Examinations: 60%

Assessment Methodology: Activity (30%), Internal Assessment Test (70%)

TEXT BOOKS:

1.	Dr. N. Kavitha, Tamils and Technology, VRB Publishers Pvt. Ltd., 2023.

SD26C02	Employability Skills - II	L	T	P	TW/SL	Total	C	SDG
		0	0	60	60	120	1	3,4,8,9,16

COURSE OBJECTIVES:

- To develop students' professional communication skills including verbal, non-verbal, and written communication essential for engineering careers.
- To enhance students' creative thinking, storytelling, emotional intelligence, and interpersonal skills through experiential learning activities.
- To build quantitative aptitude and mental arithmetic proficiency using Vedic math techniques and shortcut calculation methods for competitive examinations.
- To introduce logical thinking, algorithmic problem-solving, and no-code application development as foundational computational skills.
- To prepare students for career readiness through resume building, LinkedIn optimization, mock interviews, and professional self-presentation.

COURSE CONTENT:

UNIT I	Creative Communication and	0	0	12	12	24		4,8
--------	----------------------------	---	---	----	----	----	--	-----

factorization, shortcut methods for HCF and LCM, Divisibility rules and their application in aptitude problems, Common percentage-to-fraction conversions and memorization strategies

Activities

1. Speed Arithmetic Practice – Addition, Subtraction, and Multiplication Shortcuts
2. Speed Arithmetic Practice – Division, Percentages, HCF, LCM, and Fraction Shortcuts

UNIT IV	Critical Thinking, Logical Reasoning and Debate	0	0	12	12	24		4,8
----------------	--	---	---	----	----	----	--	-----

Finding square roots quickly using Vedic math and approximation strategies, Cube root shortcut methods and cube pattern recognition, Fast cube calculation techniques and cube multiplication shortcuts, Fraction addition and subtraction shortcuts using LCM-based methods, Multi-step arithmetic shortcuts and nested calculation techniques, Logical simplification approaches for competitive aptitude problems, Advanced number manipulation tricks and rapid comparison techniques, Mental computation strategies for competitive examinations, Error checking techniques and divisibility validation methods, Quick verification methods for arithmetic accuracy, Advanced mental calculation techniques and rapid arithmetic simplifications, Speed math assessment preparation and timed practice strategies

Activities

1. Vedic Math and Advanced Arithmetic – Squares, Cubes, and Mental Computation

UNIT V	Computational Thinking	0	0	12	12	24		8,9
---------------	-------------------------------	---	---	----	----	----	--	-----

Understanding problems and solution approaches in engineering contexts, Steps in problem solving and basics of algorithms and flowcharts, Logical thinking exercises and real-world problem-solving activities, Number patterns, mathematical reasoning, and number-based puzzles, Visual reasoning concepts, grid-based thinking, and pathfinding activities, Pattern recognition and introductory graph and maze-solving exercises, Sequential thinking and writing simple pseudocode, Conditional statements, decision-making logic, and looping concepts, Introduction to no-code platforms – UI design basics and drag-and-drop app development, Creating simple workflows, publishing and testing basic apps, Resume building – structure, content, ATS optimization, and formatting, LinkedIn profile optimization – headline, summary, skills, and connections, Reporter technique – questioning, listening, and summarization skills, HR and technical interview simulation and career readiness frameworks

Activities

1. Logical Thinking, Flowchart Design, and Pseudocode Writing
2. No-Code App Development – UI Design and Workflow Creation
3. Resume Building and LinkedIn Profile Optimization
4. Mock Interview, Feedback Session, and Career Readiness Assessment

COURSE OUTCOMES:

At the end of the course, the students will be able to:

CO1:	Remember and recall key concepts of professional communication, emotional intelligence, habit formation, and goal-setting frameworks relevant to engineering workplace scenarios.
CO2:	Understand and explain mental arithmetic techniques, Vedic math shortcuts, percentage-fraction conversions, and quantitative aptitude concepts applicable to competitive examinations.
CO3:	Apply storytelling, creative thinking, presentation skills, negotiation strategies, and role-play techniques to real-world professional communication contexts.
CO4:	Analyze logical problems, design step-by-step algorithms, construct flowcharts, and develop solutions using no-code platforms and computational thinking approaches.
CO5:	Evaluate personal career readiness and create professional artifacts including resumes, LinkedIn profiles, and interview responses through simulated HR and technical interview assessments.

Weightage: Continuous Assessment: 100%

Assessment Methodology:

Assessment Type	Weightage	Marks	Mode of Evaluation
Continuous Skill Assessment (CSA)	60%	60	Continuous, rubric-based evaluation through communication activities, aptitude practice, computational thinking exercises and career readiness tasks
Terminal Skill Assessment (TSA)	40%	40	Weekly assessment + practical skill demonstration + presentation/interview + portfolio viva
Total	100%	100	—

A. Continuous Skill Assessment

Component	Description	CO(s)	Marks
Daily Topical Assessment	Short assessment at the close of each session evaluating communication concepts, emotional intelligence, speed arithmetic, logical reasoning and computational thinking.	CO1, CO2	10
Creative Communication Activities & Participation	Rubric-based evaluation of Story Mason, Picture Connector, Tourism Pitch, Reporter Activity, Shopping Role Play and Insane Inventor through presentations, storytelling and collaborative communication.	CO1, CO3	10
Personal Development & Team Engagement	Evaluation of participation in Emotional Intelligence workshops, SMART Goal Setting, Habit Formation	CO1, CO5	10

	activities, reflective journaling and collaborative learning exercises.		
Speed Mathematics & Logical Reasoning Practice	Continuous assessment through Vedic Mathematics exercises, mental arithmetic drills, aptitude worksheets and timed calculation challenges.	CO2, CO4	10
Computational Thinking & No-Code Development	Assessment of flowcharts, pseudocode, logical reasoning exercises, no-code application development and workflow implementation activities.	CO4, CO5	10
Career Readiness Portfolio	Evaluation of resume, LinkedIn profile, no-code project documentation, interview preparation, reflective journal and professional development portfolio.	CO3, CO5	10
Subtotal (CSA)			60

B. Terminal Skill Assessment (TSA)

Component	Description	CO(s)	Marks
Weekly Assessment	Cumulative score of weekly consolidation tests covering communication, emotional intelligence, speed mathematics, computational thinking and career readiness concepts.	CO1, CO2	10
Integrated Practical Assessment	Practical assessment comprising communication presentation, speed mathematics problem solving, computational thinking task, algorithm/flowchart design or no-code application development.	CO2, CO4	15
Professional Presentation / Mock Interview	Individual presentation, product pitch or HR/technical interview simulation assessing communication, creativity, confidence, problem-solving and professionalism.	CO3, CO5	10
Portfolio Viva-Voce	Evaluation of resume, LinkedIn profile, no-code project, reflective journal and career readiness portfolio through viva.	CO4, CO5	5
Subtotal (TSA)			40

C. Common Evaluation Rubric

Evaluation Criterion	Descriptor	Weight
Knowledge & Application	Demonstrates understanding and effective application of communication, emotional intelligence, quantitative aptitude, computational thinking and career readiness concepts in practical situations.	25%
Communication & Presentation	Communicates ideas clearly with appropriate language, confidence, presentation skills, active listening and effective interpersonal interaction.	20%

Critical Thinking & Problem Solving	Demonstrates logical reasoning, analytical thinking, creativity and systematic problem-solving while selecting appropriate solution strategies.	25%
Professionalism & Collaboration	Exhibits teamwork, leadership, emotional intelligence, ethical behaviour, responsibility, workplace etiquette and positive participation.	20%
Innovation & Task Completion	Demonstrates originality, creativity, organization, timely completion and quality of assigned tasks and deliverables.	10%
